GENERAL FEATURES

Pump Saver System

We engineer the pump system so that when all water flows are in the off position, the pump recycles the water back to the main water tank. This keeps the pump head cool, substantially increasing the pump life.

Hoses and Wiring

All hose and wiring is above deck for easy access for service.

Antifreeze System

We engineer our units with our quick antifreeze system where you close the water tank ball valve and open the antifreeze ball valve - then run the machine for 30 seconds and the entire system is antifreezed - to start the machine - then recapture the antifreeze in an antifreeze tank for reuse.

Soap Injection System

An exclusive feature that we offer is the chemical injector. This really makes a difference in the quality of the clean job. This is metered off of an 8 gallon tank.

Twin Filter System

We pre-plumb the pump intake so you can draw water from a tank of garden hose, and we include a dual filter system, one 80 mesh and the other 50 mesh to protect the pump. This has proven to dramatically increase the pump life and reduce down time.
