

Over 30 Years of Building Quality Equipment!

**Single Engine / Gas**

**CLEANS 2" TO 12" LINES  
SINGLE AXLE**

**DRAIN LINE JETTING EQUIPMENT**

HotJet's Sewer Drain Line Jetters are engineered for the **Professional Rooter, Plumber and Municipalities** and will tackle the toughest blockages! **Extremely effective in removing grease, soils, ice build ups, and blockages in drain lines from 2" to 12"** - Easy to operate and priced right! Our Hot Jet Units are truly versatile workhorses - and they can be utilized as a dual purpose machine. **First** - as a powerful drain jetter and **Second** as a high pressure cleaning unit to clean up properties. The unit includes our **Exclusive Engineering Features and the Best Warranty in the Industry!**

**Exclusive Engineering Features**

**Dual Filter Intake System**

We pre-plumb the pump intake so the draw water from the tank is dual filtered - one 80 mesh filter and the other a 50 mesh filter to protect the pump. This has proven to dramatically increase the pump life and reduce down time.

**Pump**

The pump systems we use are manufactured by General Pumps. The Emperor Series General Pump are proven with literally thousands in service worldwide. They are easy and inexpensive for service and we back them with a 10 year warranty.

**Pump Saver System**

We engineer all sewer jetter trailers with our "pump saver system" - that when the hose flow is released, the bypass water re-circulates back to the water tank. This keeps the head of the pump cool extending its life substantially.

**TBDS™ (Total Belt Driven System)**

All components are belt driven. The pump is Triple-V-Belt Driven. Belt driven reduces vibration and allows the pump to run at 1/2 RPM. This extends operational life, especially vs. gear driven power plants.

**Chemical Application**

The equipment operator can control the concentration levels at the machine and controls the chemical concentration depending on the job needs.

**Dual Antifreeze Systems**

(1) Our sewer jetter trailer units come with our quick antifreeze system where you close one valve and open the antifreeze ball valve - then run the machine for 30 seconds and the entire system is antifreezed. Start the machine - then recapture the antifreeze in the antifreeze tank and re-attach the jetter nozzle and you are ready to jet!

(2) System Blow Out - Attach an air hose to head of pump and open all valves.

(3) Total System Recycle - In cold weather you can also leave the equipment running and it will recycle the water back to tank.
